Definition

A *strict monoidal category* is a strict monoidal stacking category which is a functorial stacking category $\langle \mathbf{C}, \otimes \rangle$.

Unpacked somewhat, this means there is a stacking functor

$$\otimes : \mathbf{C} \times \mathbf{C} \to \mathbf{C}$$

and an object $\mathbf{1} \in \mathrm{Ob}_{\mathbf{C}}$, the *monoidal unit*, satisfying

$$X \otimes \mathbf{1} = X \qquad \text{and} \qquad \mathbf{1} \otimes X = X$$

and

$$f \otimes \mathrm{id}_{\mathbf{1}} = f \qquad \text{and} \qquad \mathrm{id}_{\mathbf{1}} \otimes f = f.$$

for any object X and any morphism f in $\mathbf{C}$.
