

Definition (Design problem with implementation). A *design problem with implementation* (DPI) is a tuple

$$\langle F, R, I, \text{prov}, \text{req} \rangle$$

where:

- ▷ F is a poset, called *functionality space*;
- ▷ R is a poset, called *requirements space*;
- ▷ I is a set, called *implementation space*;
- ▷ the map $\text{prov} : I \rightarrow F$ maps an implementation to the functionality it provides;
- ▷ the map $\text{req} : I \rightarrow R$ maps an implementation to the resources it requires.
