

Definition (Category). A *category* **C** is:

Constituents

1. Objects: a collection $\text{Ob}_{\mathbf{C}}$, whose elements are called *objects*.
2. Morphisms: for every pair of objects $X, Y \in \text{Ob}_{\mathbf{C}}$, there is a set $\text{Hom}_{\mathbf{C}}(X; Y)$, elements of which are called *morphisms* from X to Y . The set is called the “hom-set from X to Y ”.
3. Identity morphisms: for each object X , there is an element $\text{Id}_X \in \text{Hom}_{\mathbf{C}}(X; X)$ which is called *the identity morphism of X* .
4. Composition operations: given any morphism $f \in \text{Hom}_{\mathbf{C}}(X; Y)$ and any morphism $g \in \text{Hom}_{\mathbf{C}}(Y; Z)$, there exists a morphism $f \circ g \in \text{Hom}_{\mathbf{C}}(X; Z)$ which is the *composition of f and g* .

Conditions

1. Unitality: It holds that:

$$\frac{\text{Id}_X : X \rightarrow X \quad f : X \rightarrow Y \quad \text{Id}_Y : Y \rightarrow Y}{\text{Id}_X \circ f = f = f \circ \text{Id}_Y}$$

2. Associativity: it holds that

$$\frac{f : X \rightarrow Y \quad g : Y \rightarrow Z \quad h : Z \rightarrow W}{(f \circ g) \circ h = f \circ (g \circ h)}$$
