

Definition (Identity design problem). For any poset A , the *identity design problem* $\text{id}_A : \textcolor{green}{A} \dashrightarrow \textcolor{red}{A}$ is a monotone map

$$\text{id}_A : \textcolor{green}{A}^{\text{op}} \times \textcolor{red}{A} \xrightarrow{\text{Pos}} \mathbf{Bool},$$

$$\langle \textcolor{green}{a}_1^*, \textcolor{red}{a}_2 \rangle \mapsto \textcolor{green}{a}_1 \leq_A \textcolor{red}{a}_2.$$
