

**Definition** (Order on morphisms in  $\mathbf{Pos}_{\mathcal{L}}$ )

Given any two morphisms  $f, g : X \rightarrow Y$  in  $\mathbf{Pos}_{\mathcal{L}}$ , we define an order between them as

$$f \leq_{\mathbf{Pos}_{\mathcal{L}}} g$$

---

$$f^{\star}(x) \leq_{\mathcal{L}Y} g^{\star}(x), \quad \forall x \in X.$$
