

Definition (Identity design problem). For any poset \mathbf{A} , the *identity design problem* $\text{id}_{\mathbf{A}} : \mathbf{A} \dashrightarrow \mathbf{A}$ is a monotone map

$$\text{id}_{\mathbf{A}} : \mathbf{A}^{\text{op}} \times \mathbf{A} \xrightarrow{\text{Pos}} \mathbf{Bool},$$

$$\langle a_1^*, a_2 \rangle \mapsto a_1 \leq_{\mathbf{A}} a_2.$$
