

Lemma. $\mathbf{Pos}_{\mathcal{U}}$ is a monoidal category with the following additional structure:

1. *Tensor product* \otimes : On objects, the tensor product corresponds to the product of posets. Given two morphisms $f : X \rightarrow Y$ and $g : Z \rightarrow U$, we have $f \otimes g : X \times Z \rightarrow Y \times U$, with

$$(f \otimes g)^{\star} : X \times Z \rightarrow_{\mathbf{Pos}} \mathcal{U}(Y \times U)$$

$$\langle x, z \rangle \mapsto f^{\star}(x) \times g^{\star}(z).$$

Note that the Cartesian product of upper sets is an upper set.

2. *Unit*: The unit is the identity poset: the poset with a singleton carrier set and only the identity relation. We denote this by $\{\bullet\}$.
3. *Left unitor*: The left unitor is given by the pair of morphisms $\mathbf{lu}_X : \{\bullet\} \times X \rightarrow X$ and $\mathbf{lu}_X^{-1} : X \rightarrow \{\bullet\} \times X$, with

$$\mathbf{lu}_X^{\star} : \{\bullet\} \times X \rightarrow_{\mathbf{Pos}} \mathcal{U}X$$

$$\langle \bullet, x \rangle \mapsto \uparrow\{x\},$$

and

$$\mathbf{lu}_X^{-1\star} : X \rightarrow_{\mathbf{Pos}} \mathcal{U}(\{\bullet\} \times X)$$

$$x \mapsto \{\bullet\} \times \uparrow\{x\},$$

respectively.

4. *Right unitor*: The right unitor is given by the pair of morphisms $\mathbf{ru}_X : X \times \{\bullet\} \rightarrow X$ and $\mathbf{ru}_X^{-1} : X \rightarrow X \times \{\bullet\}$, with

$$\mathbf{ru}_X^{\star} : X \times \{\bullet\} \rightarrow_{\mathbf{Pos}} \mathcal{U}X$$

$$\langle x, \bullet \rangle \mapsto \uparrow\{x\},$$

and

$$\mathbf{ru}_X^{-1\star} : X \rightarrow_{\mathbf{Pos}} \mathcal{U}(X \times \{\bullet\})$$

$$x \mapsto \uparrow\{x\} \times \{\bullet\},$$

respectively.

5. *Associator*: The associator is given by the pair of morphisms $\mathbf{as}_{XY,Z} : (X \times Y) \times Z \rightarrow X \times (Y \times Z)$ and $\mathbf{as}_{X,YZ} : X \times (Y \times Z) \rightarrow (X \times Y) \times Z$, given by

$$\mathbf{as}_{XY,Z}^{\star} : (X \times Y) \times Z \rightarrow_{\mathbf{Pos}} \mathcal{U}X \times (\mathcal{U}Y \times \mathcal{U}Z)$$

$$\langle \langle x, y \rangle, z \rangle \mapsto \uparrow\{x\} \times (\uparrow\{y\} \times \uparrow\{z\}),$$

and

$$\mathbf{as}_{X,YZ}^{\star} : X \times (Y \times Z) \rightarrow_{\mathbf{Pos}} (\mathcal{U}X \times \mathcal{U}Y) \times \mathcal{U}Z$$

$$\langle x, \langle y, z \rangle \rangle \mapsto (\uparrow\{x\} \times \uparrow\{y\}) \times \uparrow\{z\}.$$
