

Definition (Properties of a relation). Let $R \subseteq \mathbf{A} \times \mathbf{B}$ be a relation. R is:

1. *Surjective* if for all $y \in \mathbf{B}$ there exists an $x \in \mathbf{A}$: $\langle x, y \rangle \in R$;
2. *Injective* if for all $\langle x_1, y_1 \rangle, \langle x_2, y_2 \rangle \in R$: $y_1 = y_2 \Rightarrow x_1 = x_2$;
3. *Everywhere-defined* if for all $x \in \mathbf{A}$ there exists an $y \in \mathbf{B}$: $\langle x, y \rangle \in R$;
4. *Single-valued* if for all $\langle x_1, y_1 \rangle, \langle x_2, y_2 \rangle \in R$: $x_1 = x_2 \Rightarrow y_1 = y_2$.
