

Definition (Identity design problem)

For any poset \mathbf{P} , the *identity design problem* $\text{id}_{\mathbf{P}} : \mathbf{P} \rightarrow \mathbf{P}$ is a monotone map

$$\text{id}_{\mathbf{P}} : \mathbf{P}^{\text{op}} \times \mathbf{P} \rightarrow_{\text{Pos}} \mathbf{Bool},$$

$$\langle p_1^*, p_2 \rangle \mapsto p_1 \leq_{\mathbf{P}} p_2.$$
