

Definition (Sum of resources)

If the poset \mathbf{P} is monoidal with monoidal product \otimes , then the “*sum*” of n copies of \mathbf{P} is a design problem given by

$$\Sigma^n : (\mathbf{P}^n)^{\text{op}} \times \mathbf{P} \longrightarrow_{\text{Pos}} \mathbf{Bool},$$
$$\langle \langle p_1, \dots, p_n \rangle^*, q \rangle \longmapsto (p_1 \otimes \dots \otimes p_n \leq_{\mathbf{P}} q).$$

Clearly Σ^n is monotone. Diagrammatically:
