

Definition (Order on DP)

Suppose that \mathbf{P} and \mathbf{Q} are posets, and that $\mathbf{d}, \mathbf{e} : \mathbf{P} \rightarrow \mathbf{Q}$ are design problems. We define the order as follows:

$$\frac{\mathbf{d} \leq_{\mathbf{DP}} \mathbf{e}}{\mathbf{d}(p^*, q) \leq_{\mathbf{Bool}} \mathbf{e}(p^*, q)},$$

for all $p \in \mathbf{P}, q \in \mathbf{Q}$.
