

Definition (Semi-functor). Given two semi-categories \mathbf{C} and \mathbf{D} , a *semi-functor* $F : \mathbf{C} \rightarrow \mathbf{D}$ from \mathbf{C} to \mathbf{D} is defined by the following data and conditions.

Data:

i) A map

$$F_{\text{ob}} : \text{Ob}_{\mathbf{C}} \rightarrow \text{Ob}_{\mathbf{D}}.$$

ii) For every pair of objects X, Y of \mathbf{C} a map

$$F_{\text{mor}} : \text{Hom}_{\mathbf{C}}(X; Y) \rightarrow \text{Hom}_{\mathbf{D}}(F_{\text{ob}}(X); F_{\text{ob}}(Y))$$

Conditions:

1. It holds that

$$\frac{f : X \rightarrow_{\mathbf{C}} Y \quad g : Y \rightarrow_{\mathbf{C}} Z}{F_{\text{mor}}(f \circ g) = F_{\text{mor}}(f) \circ F_{\text{mor}}(g)}.$$
