

Definition (Drawings)

There exists a category **Draw** in which:

1. An object in $\alpha \in \text{Ob}_{\text{Draw}}$ is a black-and-white drawing, that is a function $\alpha : \mathbb{R}^2 \rightarrow \mathbf{Bool}$.
2. A morphism in $\text{Hom}_{\text{Draw}}(\alpha; \beta)$ between two drawings α and β is an invertible map $f : \mathbb{R}^2 \rightarrow \mathbb{R}^2$ such that $\alpha(x) = \beta(f(x))$.
3. The identity function at any object α is the identity map on \mathbb{R}^2 .
4. Composition is given by function composition.
