

Definition (Semi-category action)

A *semi-category action* of a semi-category \mathbf{C} is defined by

- ▷ a map φ that associates, to each object $X \in \mathbf{Ob}_{\mathbf{C}}$, a set $\varphi(X)$:

$$\varphi : \mathbf{Ob}_{\mathbf{C}} \rightarrow \mathbf{Ob}_{\mathbf{Set}};$$

- ▷ a map γ that associates, to each morphism in \mathbf{C} , a function:

$$\gamma : \mathbf{Hom}_{\mathbf{C}}(X; Y) \rightarrow \mathbf{Hom}_{\mathbf{Set}}(\varphi(X); \varphi(Y));$$

Moreover, this condition must hold:

$$\gamma(f \circ g) = \gamma(f) \circ \gamma(g).$$
