Definition (Operad)

An operad is defined by:

Constituents

- 1. *Objects*: A collection $Ob_{\mathcal{O}}$;
- 2. *Morphisms*: Let $n \in \mathbb{N}$. For each finite string $[X_1, ..., X_n]$ of objects and each object Y, one specifies a set $\operatorname{Hom}_{\mathcal{O}}([X_1, ..., X_n]; Y)$, elements of which are morphisms $[X_1, ..., X_n] \to Y$;
- 3. *Identity morphisms*: For each object X, a morphism $\mathrm{Id}_X \in \mathrm{Hom}_{\mathcal{O}}([X_1, ..., X_n]; Y)$;
- 4. Composition operations:

$$\operatorname{Hom}_{\mathcal{O}}\left([X_{1}^{1},\ldots,X_{n_{1}}^{1}];Y_{1}\right)\times\ldots\times\operatorname{Hom}_{\mathcal{O}}\left([X_{1}^{m},\ldots,X_{n_{m}}^{m}];Y_{m}\right)\times\operatorname{Hom}_{\mathcal{O}}\left([Y_{1},\ldots,Y_{m}];Z\right)\rightarrow\operatorname{Hom}_{\mathcal{O}}\left([X_{1}^{1},\ldots,X_{n_{m}}^{m}];Z\right)$$

$$\langle f_{1},\ldots,f_{m},g\rangle\mapsto[f_{1},\ldots,f_{m}]\ ^{\circ}_{9}\ g.$$

Conditions

1. Associativity:

$$[[f_1^1, \dots, f_{n_1}^1] \circ g_1, [f_1^2, \dots, f_{n_2}^2] \circ g_2, \dots, [f_1^m, \dots, f_{n_m}^m] \circ g_m] \circ h = [f_1^1, \dots, f_{n_m}^m] \circ ([g_1, \dots, g_m] \circ h).$$

2. *Unitality*:

$$[\mathrm{Id}_{X_1},\ldots,\mathrm{Id}_{X_n}]\ \S\ f=f=f\ \S\ \mathrm{Id}_Y,\quad \forall f:\ [X_1,\ldots,X_n]\to Y.$$
