Definition (Feedback operator †). For $h: \mathbf{F}_1 \times \mathbf{R} \to \mathcal{A}\mathbf{R}$, define

$$h^{\dagger}: \mathbf{F}_1 \to \mathcal{A}\mathbf{R},$$

$$f_1 \mapsto \mathrm{lfp}\left(\Psi_{f_1}^h\right),$$

where $\Psi_{f_1}^h$ is defined as

$$\Psi_{f_1}^h : \mathcal{A}\mathbf{R} \to \mathcal{A}\mathbf{R},$$

$$R \mapsto \min_{\mathbf{r} \in \mathbb{R}} \bigcup_{\mathbf{r} \in \mathbb{R}} h(f_1, \mathbf{r}) \cap \uparrow \mathbf{r}.$$
