**Definition** (DPI composition). The series composition of two DPIs

$$dp_1 = \langle \mathbf{F}_1, \mathbf{R}_1, \mathbf{I}_1, \mathsf{prov}_1, \mathsf{req}_1 \rangle,$$
  
$$dp_2 = \langle \mathbf{F}_2, \mathbf{R}_2, \mathbf{I}_2, \mathsf{prov}_2, \mathsf{req}_2 \rangle,$$

for which  $\mathbf{F}_2 = \mathbf{R}_1$ , is

$$(dp_1 \circ dp_2) := \langle \mathbf{F}_1, \mathbf{R}_2, \mathbf{I}, \text{prov}, \text{req} \rangle,$$

$$I = \{[i_1 ; i_2] \in (I_1 ; I_2) \mid req_1(i_1) \leq_{\mathbf{R}_1} prov_2(i_2)\},\$$

prov: 
$$[i_1; i_2] \mapsto \operatorname{prov}_1(i_1),$$
  
req:  $[i_1; i_2] \mapsto \operatorname{req}_2(i_2).$
