Definition (Functions as relations)

Let **A** and **B** be sets. A relation $R \subseteq A \times B$ is a *function* if it satisfies the following two conditions:

1. for all
$$x \in A$$
 $\exists y \in B : xRy$;

1. IOI all
$$\lambda$$

2. for all
$$x_1 R_1$$

2. for all $x_1 R y_1, x_2 R y_2$ holds:

$$\mathbf{n} x_1 \mathbf{n} y_1, x_2 \mathbf{n} y_2 \mathbf{n} \mathbf{o} \mathbf{n} \mathbf{s}.$$

$$x_1 = x_2$$

 $y_1 = y_2$
