The uncertainty endofunctor Unc:  $\mathbf{DP} \to \mathbf{DP}$  is defined as follows:

**Definition** (Uncertainty endofunctor).  $\ll \ll < \text{HEAD} = = = = = = >>>> 71b945628cbec0b6db483f3019969f9faafed504$ 

- 1. It maps an object **P** in **DP** (poset) to its poset of intervals Int(**P**).
- 2. It maps a morphism in **DP d**:  $\mathbf{F} \longrightarrow \mathbf{R}$  to Unc(**d**), where:

Unc(**d**): Int(**F**)<sup>op</sup> × Int(**R**) 
$$\rightarrow_{\mathbf{Pos}}$$
 **Bool** 
$$\langle [f_{\mathsf{L}}, f_{\mathsf{U}}]^*, [r_{\mathsf{L}}, r_{\mathsf{U}}] \rangle \mapsto \mathbf{d}(f_{\mathsf{L}}^*, r_{\mathsf{L}}) \wedge \mathbf{d}(f_{\mathsf{L}}^*, r_{\mathsf{U}}).$$
