Definition (Loop operator †)

For a map $h: \mathbf{F}_1 \times \mathbf{F}_2 \to \mathcal{A}\mathbf{R}$, define

$$f_1 \mapsto \operatorname{lfp}\left(\Psi_{f_1}^h\right),$$

 $h^{\dagger}: \mathbf{F}_1 \to \mathcal{A}\mathbf{R},$

where If p is the least-fixed point operator, and $\Psi_{f_1}^h$ is defined as

$$\Psi_{f_1}^h : \mathcal{A}\mathbf{R} \to \mathcal{A}\mathbf{R},$$

$$R \mapsto \min_{\mathbf{r} \in R} \bigcup_{r \in R} h(f_1, r) \cap \uparrow r.$$
