Definition (Discrete-time linear systems). A discrete-time linear time-invariant proper open system is defined by three matrices **A**, **B**, **C**. Together they give a recurrence of the type

$$\mathbf{x}_{k+1} = \mathbf{A}\mathbf{x}_k + \mathbf{B}\mathbf{u}_k,$$
 $\mathbf{y}_k = \mathbf{C}\mathbf{x}_k.$

 $\mathbf{y}_k = \mathbf{C}\mathbf{x}_k$. If \mathbf{x} has dimension $n \ge 1$, u dimension $m \ge 1$ and \mathbf{y} dimension $p \ge 1$, then \mathbf{A} has dimension $n \times n$, \mathbf{B} has dimension $n \times m$, and \mathbf{C} has dimension $p \times n$.
