Definition (Companion and conjoint). Let **P** and **Q** be posets, and suppose that $f: \mathbb{P} \to_{\mathbf{Pos}} \mathbb{Q}$ is a monotone map. We define its companion in **DP**, denoted $\hat{f}: \mathbf{P} \longrightarrow \mathbf{Q}$, and its *conjoint*, denoted $\check{f}: \mathbf{Q} \longrightarrow \mathbf{P}$ as

forced $f: \mathbf{P} \to \mathbf{Q}$, and its conjoint, denoted $f: \mathbf{Q} \to \mathbf{P}$ as $\widehat{f}(p^*,q) := f(p) \leq_{\mathbf{O}} q \quad \text{and} \quad \widecheck{f}(q^*,p) := q \leq_{\mathbf{P}} f(p).$
