Definition (Disjoint union category). Given two categories \mathbf{C} and \mathbf{D} , their *disjoint union* $\mathbf{C} + \mathbf{D}$ is the category specified as follows:

- 1. *Objects*: Objects are elements of $Ob_{\mathbb{C}} + Ob_{\mathbb{D}}$; that is, objects are tuples of the form $\langle X, i \rangle$, with i = 1 or i = 2, depending on whether $X \in Ob_{\mathbb{C}}$ or $X \in Ob_{\mathbb{D}}$.
- 2. Morphisms: Given objects $\langle X, i \rangle$, $\langle Y, j \rangle \in \mathrm{Ob}_{\mathbf{C} + \mathbf{D}}$,

$$\operatorname{Hom}_{\mathbf{C}+\mathbf{D}}(\langle X,i\rangle,\langle Y,j\rangle) := \begin{cases} \operatorname{Hom}_{\mathbf{C}}(X,Y) & \text{if } i=j=1, \\ \operatorname{Hom}_{\mathbf{D}}(X,Y) & \text{if } i=j=2, \\ \emptyset & \text{else.} \end{cases}$$

- 3. *Identity morphisms*:
- 4. Composition of morphisms:
