Definition (Coproduct). Given two DPIs with same functionality and resources $dp_1 = \langle F, R, I_1, \text{prov}_1, \text{req}_1 \rangle$ and $dp_2 = \langle F, R, I_2, \text{prov}_2, \text{req}_2 \rangle$, define their co-product as

(0.1)

$$dp_1 \sqcup dp_2 := \langle F, R, I_1 \sqcup I_2, prov, req \rangle$$
,

where

$$\operatorname{prov} : i \mapsto \begin{cases} \operatorname{prov}_1(i), & \text{if } i \in I_1, \\ \operatorname{prov}_2(i), & \text{if } i \in I_2, \end{cases}$$

$$\operatorname{req} : i \mapsto \begin{cases} \operatorname{req}_1(i), & \text{if } i \in I_1, \\ \operatorname{req}_2(i), & \text{if } i \in I_2. \end{cases}$$
