**Definition** (Sum of functionalities for monoidal posets)

If the poset  $\mathbf{P}$  is monoidal with monoidal product  $\otimes$ , then the "sum" of m copies of  $\mathbf{P}$  is a design problem given by

$$\Sigma_m: \mathbf{P} \times (\mathbf{P}^m)^{\mathrm{op}} \longrightarrow_{\mathbf{Pos}} \mathbf{Bool}$$

$$\langle p^*, \langle q_1, \dots, q_m \rangle \rangle \longmapsto (p \leq_{\mathbf{P}} q_1 \otimes \dots \otimes q_m).$$
