**Definition** (Semi-category action). A semi-category action of a semi-category **C** is defined by

 $\triangleright$  a map  $\varphi$  that associates from each object  $X \in \mathrm{Ob}_{\mathbf{C}}$ , a set  $\varphi(X)$ :

$$\varphi: Ob_{\mathbb{C}} \to Ob_{\operatorname{Set}}$$

 $\triangleright$  a map  $\gamma$  that associates to each morphism a function:

$$\gamma: \operatorname{Hom}_{\mathbf{C}}(X;Y) \to \operatorname{Hom}_{\mathbf{Set}}(\varphi(X);\varphi(Y))$$

Moreover, this condition must hold:

$$\gamma(f \circ g) = \gamma(f) \circ \gamma(g).$$
