**Definition** (Semicategory). A semicategory C is:

## Constituents

- 1. Objects: a collection  $Ob_{\mathbb{C}}$ , whose elements are called *objects*.
- 2. Morphisms: for every pair of objects  $X, Y \in \mathrm{Ob}_{\mathbb{C}}$ , there is a set  $\mathrm{Hom}_{\mathbb{C}}(X; Y)$ , elements of which are called *morphisms* from X to Y. The set is called the "hom-set from X to Y".

## Conditions

1. Associativity: for any morphisms  $f \in \operatorname{Hom}_{\mathbf{C}}(X;Y)$ ,  $g \in \operatorname{Hom}_{\mathbf{C}}(Y;Z)$ , and  $h \in \operatorname{Hom}_{\mathbf{C}}(Z;U)$ ,

$$(f \circ g) \circ h = f \circ (g \circ h).$$
