Definition (Semigroup morphism)

A morphism $F: \mathbf{S} \to \mathbf{T}$ between semigroup

A morphism
$$F: \mathbf{S} \to \mathbf{T}$$
 between semigroups

$$\mathbf{S} = \langle \mathbf{S}, \S_{\mathbf{S}} \rangle$$
 and $\mathbf{T} = \langle \mathbf{T}, \S_{\mathbf{T}} \rangle$

a function $F: \mathbb{S} \to \mathbb{T}$ such that for all $x, y \in \mathbb{S}$

is a function
$$F: \mathbb{S} \to \mathbb{T}$$
 such that for all $x, y \in \mathbb{S}$,

 $F(x \circ_{\mathbf{S}} y) = F(x) \circ_{\mathbf{T}} F(y).$
