Definition (Category **LPos**). The category **LPos** consists of:

- 1. Objects: objects are posets;
- 2. *Morphisms*: given objects $X, Y \in Ob_{LPos}$, morphisms from X to Y are monotone maps of the form $f: X \to \mathcal{L}Y$.
- 3. Composition of morphisms: Given morphisms $f: X \to \mathcal{L}Y, g: Y \to \mathcal{L}Z,$ their composition is given by

$$f \circ g : X \to \mathcal{L}Z$$

$$x \mapsto \bigcup_{y \in f(x)} g(y);$$

4. *Identity morphism*: given an object $X \in \mathrm{Ob}_{\mathrm{LPos}}$, the identity morphism is given by the application of the lower closure operator: $\mathrm{Id}_X(x) := \downarrow \{x\}$.
