```
class Setoid(ABC):
  A setoid is something to which elements may belong, and
  has a way of distinguishing elements.
@abstractmethod
def contains(self, x: Element) -> bool:
  """ Returns true if the element is in the set.
def equal(self, x: Element, y: Element) -> bool:
  """ Returns True if the two elements are to be considered equal.
                                                                    .....
  return x == v # default is to use the Python equality
```
