Definition (Discrete-time linear systems). A discrete-time linear time-invariant proper open system is defined by three matrices A, B, C. Together they give a recurrence of the type

$$x_{k+1} = \mathbf{A}x_k + \mathbf{B}u_k$$
$$y_k = \mathbf{C}x_k$$

If x has dimension $n \ge 1$, u dimension $m \ge 1$ and y dimension $p \ge 1$, then A has dimension $n \times n$, B has dimension $n \times m$, C has dimension $p \times n$.
